JUMPERS

ALUMILINE®

This Alumiline® kit offers 8 feet of continuous LED illumination.   Easy to install, it is the ideal enhancement for a closet and comes with everything you need to get started with linear LED lighting. This kit is available in Warm, Neutral or Cool White.
INSTALLATION

These LED strips can be mounted in multiple configurations with the connectors and clips included in this kit. Using included screws, attach *Mounting clips* to the surface in the area you'd like to have illuminated. Insert strips into clips. Connect the strips to each other using built in connectors. Take note of keeping the polarity of the wires consistent (red to red and **black** to **black**). Use the enclosed *jumpers* if you would like to provide additional spacing between the strips or if you need additional space between the power supply and the first Alumiline® strip.

The Alumiline® LED system operates on 24VDC. Use the included power supply to connect your LED strips to the Alumiline® MAX by inserting the barrel of the power supply into the *input connector*. Connect the *on/off switch* between the input connector and the power supply. Plug the power supply into the wall and turn on the Alumiline®!
