

JKL's WEEE DIRECTIVE & CCFL RECYCLING STATEMENT

The 2012/19/EU "Waste Electrical and Electronic Equipment (WEEE) Directive is aimed at proper recycling and disposal of finished electrical and electronic equipment products.

JKL Components products are not applicable to the WEEE Directive, as they are not finished products and are components that are used within a piece of equipment or in a finished good. Consequently, customers that use Cold Cathode Fluorescent lamps within their products should take care to dispose of the lamps properly, as the lamps contain trace amounts of mercury. Many resources are available to recycle these lamps. Please consult www.lamprecycle.org to identify lamp recycling locations and Federal and State regulations or contact JKL for assistance.
